Download transport request to a local file

Download Change Request Transport to local file system on your PC.

What it does?

This mini application allows the following:

1. Download a released transport request from for system to local PC.
2. Complete deletion of transport request.

What business process it solves?

Downloading of transport request without basis consultant. Transport request can also be transferred between systems that are not linked via "Transport route".

Sandbox system's objects that you have decided to move to your main system, should be packed in transports (Use transport of Copies to allow the complete packing of all objects) and be moved locally via files.

SAP system

SAP ABAP based system, any support package.

Functional specification

Program ZDOWNLOAD_TRANSPORT_REQUEST would be used for:

Finding the transport server path.

Downloading the transport files (K and R files for each transport).

How to use the app

Use transaction code SE38 to execute program ZDOWNLOAD_TRANSPORT_REQUEST and choose your destination folder where the transport files would be download to.

How to install

1. You can manually create the download program using the attached program located on the text file **Download transport request to a local file.txt**
2. Or you can Implement the mini application transport (LDVK935636) to your system with your SAP BASIS team or use MINIPPS free mini application [Uploading transport from local files](#).
