## Upload change request from PC to SAP

Upload transport request files from your PC to your SAP system

### What it does?

This mini application allows the following:

1. Upload transport request files from your PC to your SAP system.
2. Uploaded transports are automatically added to the STMS queue, waiting for manual release.

### What business process it solves?

Upload of transport request without basis consultant. Transport request can also be transferred between systems that are not linked via "Transport route".

Sandbox system's objects that you have decided to move to your main system, should be packed in transports (Use transport of Copies to allow the complete packing of all objects) and be moved locally via files.

### SAP system

SAP ERP ECC6, any support package.

### Functional specification

Program **ZUPLOAD\_TRANSPORT\_REQUEST** would be used for:

1. Finding the transport server path (see transaction code AL11).
2. Uploading the transport files (K and R files for each transport) to the DIR\_TRANS path.

### How to use the app

Use transaction code SE38 to execute program **ZUPLOAD\_TRANSPORT\_REQUEST** and choose your source folder where the transport files are.

### How to install

1. You can manually create the download program using the attached program located on the text file **ZUPLOAD\_TRANSPORT\_REQUEST.txt**
2. Or you can implement the mini application transport (**LDVK938268 ZUTR:Upload transport request from local PC**) to your system with your SAP BASIS team.
